

# RUSTIK

Pic. N7-236 rt

## THE SEMI-PROFESSIONAL

### 1 Very robust frame construction

Completely welded frame and welded drawbar as well as throughgoing U-profiled longitudinal chassis beams on each side. In addition, the RUSTIK model has one to three horizontal chassis beams for an extremely strong frame construction.

### 2 2-in-1

With the RUSTIK you can unscrew the side panels and use the trailer as a platform trailer for transport of large goods.

### 3 Very strong and functional side panels

The profiled 400 mm high side panels are made of first-class hot dip galvanised steel and bent twice to endure high resistance and to transport volume. Furthermore, RUSTIK has a drop-down headboard which makes transport of long goods easy.

### 4 Easy cargo securing

Lashing rings in all four corners to secure the cargo. The lashing rings are fitted in the plywood floor and the welded frame so that they can secure heavy and important cargo much better.

### 5 Protected multi-function tail lights

The multi-function tail lights are mounted and protected under the tail gate. Thus, the ground connections of the tail lights are protected from moist and verdigris in the best possible way and function for years without any problems.

### 6 Easy and practical unloading

All RUSTIK models are with a manual tip which makes the unloading of the cargo easier and more practical for the user. Mount a gas spring and the bed stays up.
